Assignment

Navigation Elements

Web Development Essentials

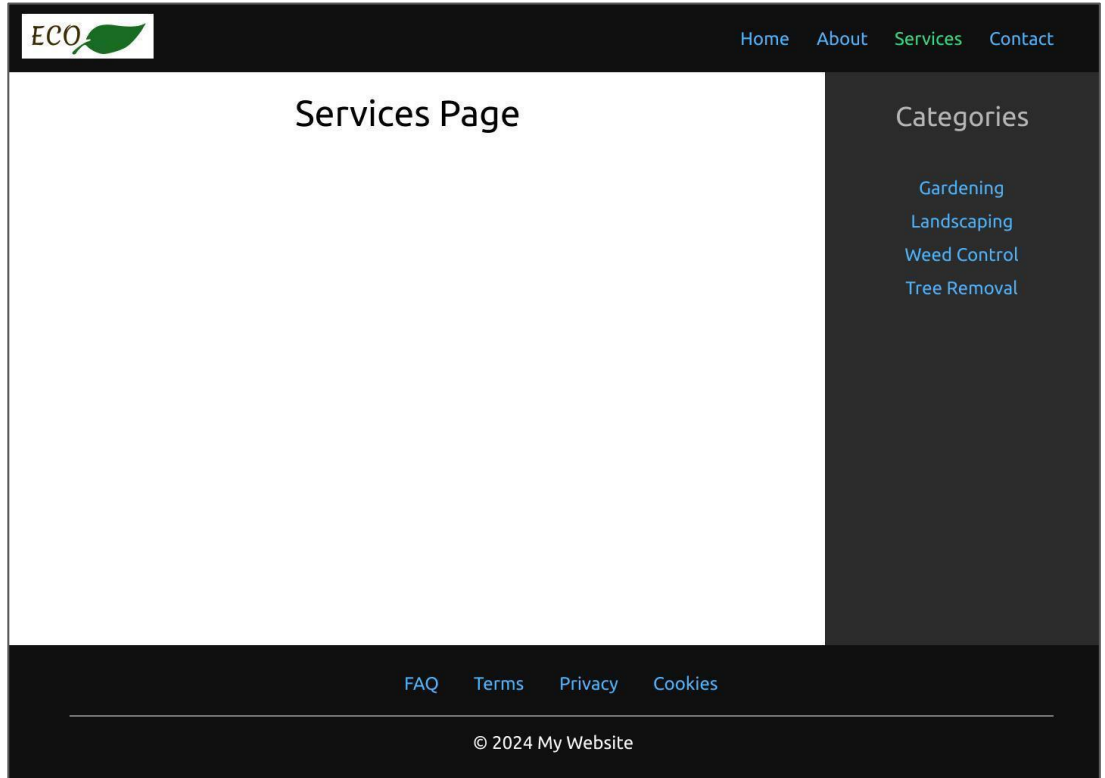

Assignment: Navigation Elements

Objectives

Practice and expand your knowledge of HTML and CSS by recreating the provided example.

Note that this example includes three navigation elements:

1. Primary website navigation
2. Secondary page navigation
3. Footer navigation

Requirements Checklist

1. GitHub Repository

Create a **new repository** on your GitHub account named *basic-navigation-example*

As you work on the assignments (through each step or checklist item), make sure to commit and push to the GitHub remote repository, so that when you finish the assignment the GitHub repository will feature the completed work.

Requirements Checklist

2. Primary Navigation

Create a primary navigation at the top of the home page and the other pages in the website, much like the one we did in the class exercise.

3. Main Page Content Area/Section

Add the main content page section with a title in it.

Requirements Checklist

4. Footer with Navigation

Add the footer that includes a navigation with links.

5. Side Page Navigation

Lastly, add a side navigation to the Services page, using the `<aside>` element.

Note: Only the **Services page** has the side navigation.

Requirements Checklist

6. Label the Navigation Elements

Make sure all the `<nav>` elements are properly labelled using the `aria-label` attribute.

7. CSS Conditions

- Use the border-box mode with the box-sizing property for the CSS Box Model.
- Use all three basic selectors: type, class, and id
- Use display property with only the block, inline, and/or inline-block modes
