

Web Development Essentials

Assignment

Basic CSS Styling

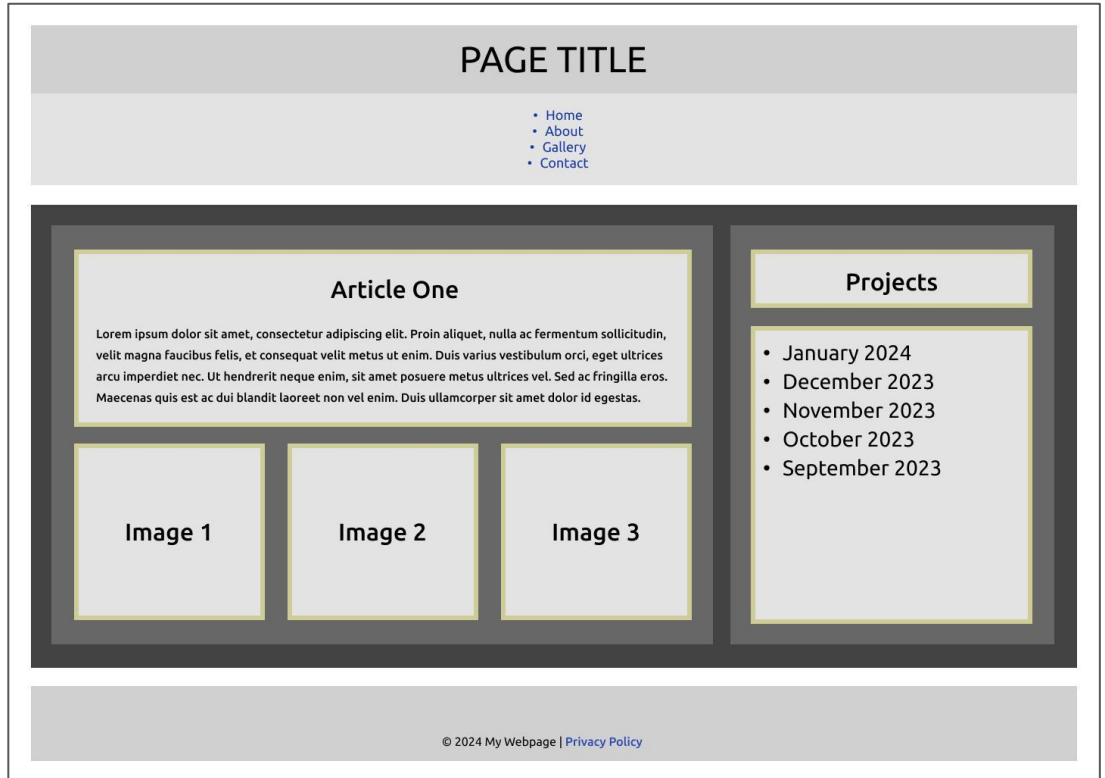

Web Development Essentials

Assignment: Basic CSS Styling

Objectives

Practice and expand your knowledge of CSS by recreating the layout in this mockup.

Work on this **on your own** at first, and then discuss with your peers any challenges you are facing.

Web Development Essentials
Assignment: Basic CSS Styling

Requirements Checklist

1. GitHub Repository

Use the Git repository in your GitHub account from the previous assignment:

basic-html-css-example

As you work on the assignments (through each step or checklist item), make sure to commit and push to the GitHub remote repository, so that when you finish the assignment the GitHub repository will feature the completed work.

Requirements Checklist

2. CSS Box Model

Use the **box-sizing** property set to the **border-box** value so that the total final size (height and width) of elements includes margin, border, and padding values.

3. Basic Selectors

Use **type** and **class** selectors, as well as at least one **id** selector, with your CSS.

Requirements Checklist

4. Block, Inline, and Inline-Block Displays

Use only **block**, **inline**, and **inline-block** **display** modes to build the layout.

5. Margin and Padding

Use **margin** and **padding** properties with your elements.

Requirements Checklist

6. Borders

Use **border** properties with your section elements.

7. Width and Height

Use **width** and **height** properties with your elements.

Requirements Checklist

8. Text Alignment

Use the `text-align` property.

9. Vertical Alignment

Use the `vertical-align` property.

Requirements Checklist

10. Background Color and Color

Use the **background-color** and **color** properties.

11. Font

Use **font** properties.
